**BV-TAN N**

## 1. BV-TAN N

BV-TAN N (Valeks) is the brand name of valonea. It is extracted by hot water from dried acorn cups and beards of oak tree fruits. The product is in powder form and it is brown coloured. BV-TAN N is used in tanning and retanning processes of various types of leathers. The colour of the leather tanned with BV-TAN N is yellowish-brown. The leather tanned with BV-TAN N is distinguished by excellent firmness and fullness via its precipitation ability of insoluble tan-ellagic acid. Accordingly with this property BV-TAN N is mainly used in production of sole leather. Additionally, with the help of different tanning methods and subsequent further processings of leathers, it is possible to obtain soft and flexible leathers as well as firm leathers. And these leathers can be used for furniture upholstery leather, shoe upper leather, lining leather and for the production of leather goods. The leathers tanned with BV-TAN N have better light fastness and lower water absorption properties than many other vegetable tanned leathers.

BV-TAN N can be used on its own or in combination with other vegetable tanning materials like Mimosa, Quebracho and Chestnut Extracts according to the tanners' individual methods.

## 2. PROPERTIES

### Specifications according to filter method

Tannins	(%)	: 68.5 ± 1.0
Moisture	(%)	: 5 ± 2.0
Non-Tannin	(%)	: 25 ± 1.0
